SECURITY

DRIVER ASSISTANCE SYSTEMS 1/2

ASSISTANCE DRIVING SEMI-AUTONOMOUS

Thanks to a camera and multiple sensors combined to adaptive cruise control, the system allows to stay in the lane and maintain a distance safety with the vehicle in front, in circulation dense like on the highway.

ACTIVE DETECTION BLIND SPOTS

The system constantly monitors invisible areas rear on both sides of the vehicle and warns when a vehicle arrives in the car's blind spots. In addition of the alert, if necessary, the system makes a correction on the steering to avoid any risk of collision.

MAINTENANCE AID OF THE TRAJECTORY

The system helps you stay on track. If the car begins to deviate from its trajectory, the system intervenes actively.

SECURITY

DRIVER ASSISTANCE SYSTEMS 2/2

REGULATOR OF SPEED ADAPTIVE

It allows you to maintain a constant speed, without having to press the accelerator, and also adapts the distance to the vehicle in front.

DETECTION OF FATIGUE OF THE DRIVER

Driver Attention Assist detects any signs of fatigue in the person behind the wheel, monitoring their style of driving and the duration of his journey, and warns him by means of audible warning signals and a cup symbol on the screen TFT.

ACKNOWLEDGEMENT SIGNS

Giulia is equipped with an intelligent system that automatically recognizes the main traffic signs in order to help the driver respect speed limits and overtaking bans. If the cruise control adaptive is activated, the speed is automatically adjusted by touching the steering wheel controls.
